

# Log in to DCPL Wireless using an OPS MacBook

The following steps will only need to be completed once. On return visits to the library, you will only need to browse to <https://10.0.21.253>, click Continue, and type in your email address to log in to our wireless network.

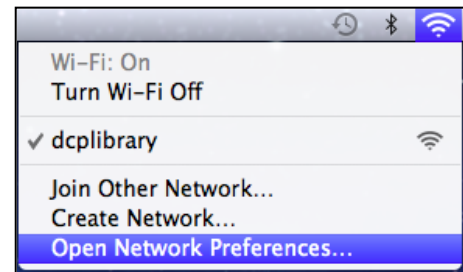

## 1. Close your Internet browser

Locate your browser's icon in the Dock, usually located at the bottom of your screen. In the example picture, the Safari icon is shown. It has a white light underneath it indicating it is open. If your browser is open, click and hold the browser icon for 2 seconds. A menu will pop up, and you may select **Quit** to close your browser.

## 2. Open Network Preferences

On the Menubar in the upper right corner of your screen, you will see the Wi-Fi icon. Click on this icon and make sure "dcplibrary" is checked. If it is not checked, select it and click on the Wi-Fi icon to open the menu again. Select **Open Network Preferences...**

## 3. Add 10.0.21.253 to Proxy Exclusions

In the Network preferences pane, click **Advanced...**. Click the **Proxies** tab. Under "Bypass proxy settings for these Hosts & Domains:", add the following: **10.0.21.253** (comma space 10.0.21.253)

Click **OK**, and then click **Apply** to save your changes. You may now click the red button at the top of the Network preferences pane to close Network Preferences. Now you may open your browser to <https://10.0.21.253>, click **Continue**, enter your email address under Guests, and click **Log In** to access the Internet.
